Easy to expand

Jablotron's alarm fully adapts to the requirements of your organisation. It professionally protects all important data in the office. Individual departments are protected independently of others and secured areas are recognisable easily and quickly.

▶ Easy to operate and shows the level of security in a department in a structured way
▶ Provides smart checks of everyday protection automatically
▶ Adapts to the segmentation of various parts of the organisation
▶ Easy to expand or re-split in line with changes to the organisation
▶ Automatically switches lights off and pulls down the blinds upon departure of the last employee

JABLOTRON
CREATING ALARMS

The JA-114E access module

operates the system via the ESF control. Depending on the size and character of the building, it may be expanded with up to 20 operating segments. It can protect, switch appliances on and off or call for help in need. It displays the system status in a structured way.

The JA-101K control panel

issues instructions to the other devices, based on the information from detectors. The built-in GSM communicator sends information about the building status to your mobile phone and to an Alarm Receiving Center, if desired. It enables you to remotely operate the entire system and various appliances e.g. heating etc.

The JA-111A outdoor siren

alerts in the case of danger. It can signal optional events (e.g. setting, warnings etc.). It also serves as an outdoor tamper detector.

The JA-110P motion detector

alerts you to the movement of people in a protected area. By changing the detector lens, detection characteristics can be altered as needed. It also contains a tamper sensor that causes an alarm when someone tries to damage it.

The JA-151M door detector

reacts to the opening of doors and windows. It is the fundamental element of the perimeter protection of a building. It protects all entrances and windows. Perimeter protection keeps you safe when you are at home or protects the premises when you leave.

The JA-110ST fire detector

alerts you to a starting fire in a timely manner. It combines two independent sensors. It reacts to smoke or a suspicious increase in temperature. Besides protecting property, it especially protects people's lives.
